DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

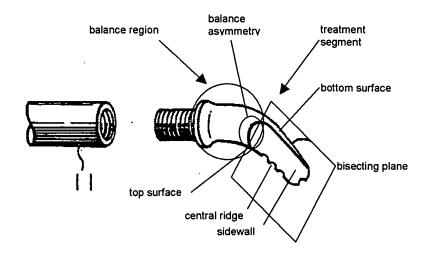

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21-27 and 30-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Idemoto (EP 0 456 470). Idemoto discloses a curved ultrasonic surgical end effector (Fig. 6B) comprising a concave treatment segment defining a first length and a central ridge contiguous with and extending substantially along the first length. (A figure illustrating the corresponding elements is found on page 3). A plane located longitudinally along the treatment segment bisects the central ridge and the bottom surface of the device. The bottom is convex while the top is concave. Located on both side walls is a balance asymmetry. Because the balance asymmetries have more material toward the edges of the device and less in the middle, the asymmetries will counter torque.

Regarding claims 25-27, although Idemoto fails to disclose the balance ratio, he does disclose the necessary features including balancing features, concavity, and a ridge. Therefore, the device inherently has a balance ratio of less than 1:200.

Application/Control Number: 09/909,557

Art Unit: 3731

Allowable Subject Matter

Claims 28 and 29 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art fails to disclose or suggest all of the limitations of claim 28 including the asymmetry surface being substantially perpendicular to the plane of symmetry. The prior art fails to disclose or suggest all of the limitations of claim 29 including, "the first balance asymmetry being shorter than the second balance asymmetry."

Application/Control Number: 09/909,557

Art Unit: 3731

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. Jacob Davis whose telephone number is (703) 305-1232. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael J. Milano can be reached on (703) 308-2496. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
